Our **values**

Customer satisfaction is our ultimate motive and that is what we try to attain in every design of ours. We mold our craftsmanship to perfection from our customer's point of view.

What **we do**

In recent years, Aluminium and glass have been widely used in the construction industry for their wide range of uses and superior performance. Their combination results in an aesthetically appealing final product. With both of these, we do a variety of services below to enable you to make your interior and exterior more comfortable and stylish.

Our **services**

• **Curtain wall & Structural glazing**

Structural glazing is a type of curtain wall system without using Aluminium or metal caps for support and it provides a continuous transparent structure without any visual interruptions. The function of the glazing is to provide safety and weather projection of the occupants. It allows sunlight to flood a home without any attendant annoyances that have previously hampered glass structures. This is one of the most accepted designs for commercial buildings. Our leading technology ensures perfect finishing to your building.

• **Spider Glazing**

A method of glazing the exterior of buildings with the help of spider glass hardware like spiders, rotules etc is called spider glazing. It provides extra support to the structure. It is designed to resist wind pressure. It can be fixed with either 2 way spiders or 4 way SS spiders fitting options. It allows full penetration of natural light into the interiors, certain types of glass prevent the absorption of UV light.. Moreover, it is very easy to install and maintain.

• uPVC/Aluminium doors & windows

uPVC has been the most widely used window and door material around the world for over 30 years. uPVC windows are known for their low maintenance and durability.

Aluminium windows, on the other hand, have been around for a long time. They are widely used because of the diverse feature that combines aesthetics with performance.

• Glass handrails and balustrades

Whether it is a commercial or residential building, handrails and balustrades are very significant safety features. Although various materials can be used to design a striking and functional balustrade, glass balustrades has become very popular in recent years because of its innumerable advantages. Glass railings are novel, fashionable, beautiful, and have a strong feeling of modernity that gets young people to like it more. Well-designed, top-quality balustrades and handrails for your residential space or home space. Strong tempered glass can be installed for your staircase which will complement the elegance of your house.

• **Frameless Tempered glass**

Simply, it is a seamless glazing option which has no obvious frame around the perimeter. They are widely used for balconies, shower screens, glass doors and bespoke conservatory windows. For a complete transparent look, we can install frameless tempered glass which looks classy and elegant.

• **Shower enclosure**

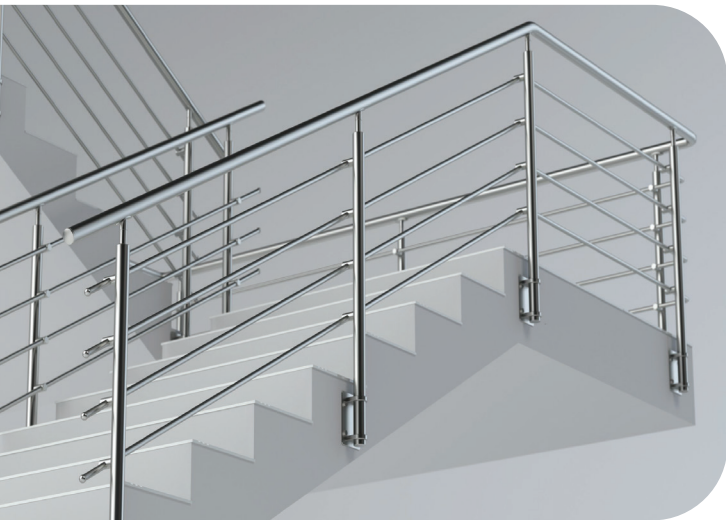

Shower enclosure prevents water from flooding outside the bath area, and it makes the space more organized. A wide range of designs for glass enclosures for your shower space are showcased by our team of designers. From a sliding partition to a complete cubicle, we can build anything that fits your bathroom.

• **Sky window & pergola**

A sky window is a light-permitting window, usually made of transparent or translucent glass, fixed on roof for daylighting and ventilation purposes. Pergolas are intended only to provide protection from direct sunlight and are not designed to act as a roof. To connect with the outer world from the comfort of your home, we create a transparent sky window to admire the beauty of the sky from inside.

• **Stainless Steel works**

Stainless steel is one of the most widely used materials to give home interiors an aesthetic experience and many other benefits. They are popular with homeowners in a short period of time as they are resistant to damage, stable and easy to keep clean. From hand rails to gates, we offer multiple things using stainless steel.

• **ACP cladding**

ACP cladding is one of the most preferred building materials in the construction world today. Innovative structures, be it business, private, institutional or medical clinics, can use ACP. This is better than paints because they give the paints many benefits over and above. In addition, it enhances the aesthetic appearance of buildings.

• **Aluminium modular kitchen**

Aluminum modular kitchens are a fast growing trend in the field of modular kitchens, from those trying to renovate their old kitchen to those looking to set up a kitchen for the first time. Aluminum modular kitchens are preferred because they are more durable and easier to maintain than wood kitchen cabinets.

We are so
class in
dealing with
the glass.
